

Pictures and data. Working together.

Captured!

“From the end-user’s standpoint, PictureLink is nothing short of amazing.”

– John Joy / Cumberland County Jail

This isn't just another photo imaging application, it's the most effective way to capture, store, organize, and manage digital images and descriptor data ever created for law enforcement agencies. All completely automated. All using your existing system.

Your data. Your computer. Doing more.

From a technical standpoint, PictureLink is an intuitive photographic imaging system designed exclusively for the highly specific needs of law enforcement and corrections agencies.

More functionality.

Nothing makes and manages mug shots better than PictureLink. But that's only the beginning. From property and evidence documentation to crime scenes, accidents and beyond, PictureLink's functionality covers the entire spectrum of law enforcement imaging applications. You can even use it to create ID badges and wristbands.

More compatibility.

Unlike most imaging systems, PictureLink is an enhancement—not a replacement. We simply allow you to do more with what you already have. That means your existing operations and computer systems remain intact. You don't have to change a thing. Best of all, PictureLink is compatible with almost every computer system in use today—from IBM Mainframes to User-Defined Graphical Interfaces and everything in between.

More efficiency.

PictureLink allows you to electronically link images to your existing data. That puts more critical information at your fingertips whenever you need it. Plus, PictureLink is intuitive so it's easy to learn and simple to use. You can even create customized forms and screens to organize, store, distribute, and manage images more efficiently than ever before.

ADDITIONAL FEATURES & BENEFITS

- Works with your existing computer system
- Your data remains intact, no re-inputting
- Highly intuitive & easy to use
- Minimal learning curve
- User-configurable environment
- User-customizable display
- Form design/edit capabilities
- Point & Click, Drag & Drop simplicity
- Simultaneous multi-destination printing
- True Windows-based, 32-bit application

SYSTEM COMPATIBILITY

- Host/Character Based Systems
- IBM Mainframes
- AS400
- Windows NT
- Unix

AND MORE

- GUI Based Systems
- Full ODBC Support
- System Developers' API
- User-Definable Interface
- Stand-Alone Systems
- Fully User-Configurable Databases

Better, faster lineups. Less work for you.

Creating lineups and preparing for witness sessions has never been faster—or easier. User prompts guide you through the process step by step. Just point, click, and provide information as requested. Behind the scenes, PictureLink's specially designed process manager applications automatically take care of various complex functions, like retrieving image files, collating system data, and gathering related files—so you don't have to.

Exclusive PictureLink features:

Image capture.

Above all, PictureLink is designed to capture images quickly and consistently, even in the most demanding environments. And our exclusive quality assurance features and automated systems make it simple. In less than 30 seconds, an image can be captured, sized, and linked to data records. There is even a Multi-Capture Module ideally suited for crime scene documentation or accident investigation.

Image quality assurance.

Image quality can mean the difference between a conviction and inadmissible evidence. Fortunately, PictureLink makes it practically impossible to take a bad picture. Exclusive PictureLink features like advanced facial image evaluation algorithms ensure you get consistent, high-quality images that conform to established quality standards.

Image enhancement.

Not only can you capture images, PictureLink also provides a virtually unlimited range of image enhancement tools. That means you can create viable lineups using images from almost any outside source, including videotape footage. No matter where an image comes from, you can adjust the size or normalize the background to conform to your standardized lineup format. The disguise module also allows you to add glasses or facial hair or articles of clothing. Best of all, you never have to open another program. All these capabilities are functions of PictureLink. There are no complex import/export procedures typical of other environments.

Why Dynamic Imaging?

We specialize exclusively in providing imaging solutions to the law enforcement community. It's all we do. And we do it better than anyone else. Because we not only understand our business, we thoroughly understand the specialized requirements of yours.
