

Pictures where you need them.

# picturelink.net

# Accessible!

**"It's all about flexibility and being able to do more with the information we have"**

— Floyd Goff / Kansas Department of Corrections

### Features at a glance

- Remote friendly, low bandwidth application
- Share images and data across your agency or across the region
- Multi-layer security
- Fully NIST compliant
- Won't interfere with your internal system functions

### Share only what you want.

Because all designated files are isolated on a secure, dedicated system, PictureLink.Net won't interfere with your regular internal system functions. More importantly, you can allow other agencies to access and retrieve specific information and images without ever exposing your primary records or jail management application. You maintain complete control of the flow of information. People see only what you want them to see. Nothing else.

### Powerful technology: sharing made easy.

It's easy because PictureLink.Net's exclusive router program does all the work for you. It automatically extracts all required information, translates it into a standardized, NIST compliant format, and transports it precisely where you want it to go. That means multiple agencies can share information with one another even if their internal systems are different. In short, you don't have to change your systems to use ours.

### Images anytime. Anywhere.

Think of it as an image distribution center. Using PictureLink.Net allows you to view and share images whenever and wherever you want. Use it on your own closed internal agency Intranet, or deploy images and data to personnel in the field—even other agencies. Either way, you're always in control of who sees what and when.

### Easy as 123.com.

Using simple, browser-based technology, PictureLink.Net enables you to conduct a full range of investigative functions in the field. Search and view images and data, create line-ups, even conduct witness sessions in cruisers, on laptops, PDAs, or any way you want. Best of all, you don't need any special software or equipment—just a browser and a standard Internet connection.

### Advanced, multi-layer security.

You don't have to sacrifice security in favor of simplicity. PictureLink.Net gives you both. All information requires an ID, account name, and a security password for access. You can even establish security restrictions based on individual security clearance. In addition, advanced point-to-point tunneling protocols ensure all information remains secure, even on the Internet.

### Why Dynamic Imaging?

We specialize exclusively in providing imaging solutions to the law enforcement community. It's all we do. And we do it better than anyone else. Because we not only understand our business, we thoroughly understand the specialized requirements of yours.
