

Positively identifying suspects has been extended to the field.

Positive ID+ is now available for use with mobile devices extending its matching capabilities and reliable identification to any location where wireless or WiFi communications are available. By adding a fingerprint reader to a wireless laptop, using a Motorola MC70/75 handheld device, or using your cell phone camera, all of the identification capabilities of **Positive ID+** are available to you in the field.

Valuable Results

Positive ID+ Mobile Solution offers the same fast reliable biometric identification in the field as making a trip back to headquarters. When a match is found, valuable information like demographics, mug shots, prior arrests and warrant information are available to officers.

Immediate Feedback

Positive ID+ provides a fast and reliable biometric identification system that can be used for in-the-field identification of individuals in just a few seconds. Designed for ease of use and flexibility, **Positive ID+** allows for fingerprint search from patrol car laptops, MC70 Motorola wireless handhelds, as well as facial recognition searches with your Blackberry, Droid, and iPhone devices.

Officer Safety

Positive ID+ Mobile Solution extends officer safety to the field by revealing a subject's true identity, and thereby, helping officers quickly assess any potential risks.

Matching Reliability

Using the same MegaMatcher algorithm with full MINEX certification for fingerprint matching, **Positive ID+** Mobile Solutions provide officers with confidence knowing that their results are backed by NIST certification for personal identity verification.

Mobile Solutions

Positive ID+ mobile extends the functionality of your existing **Positive ID+** system and can be used for:

- Suspect identification during patrol
- Sex registrant address verification
- Gang member identification
- In-cell inmate verification and identification
- Inmate verification for work release

Features at a Glance:

- Immediate biometric identification with access to arrest history & mugshots.
- Fast & accurate matching for both faces and fingerprints.
- One-to-many searches
- Digital camera, Blackberry, Droid, and iPhone facial recognition search capabilities.
- USB & Wireless handheld units available for fingerprint matching.
- Handheld supports multiple cellular technologies including CDMA/GSM/EDGE & Wi-Fi.
- ANSI/NIST ITL-1-2000 and ANSI/INCIST 378 2004 Biometric Standard support.
